

EUROPE'S ELECTRICITY SUPPLY

Grid operators can integrate large amounts of wind power:

electricity demand met by wind power
IN DENMARK

by 2025
the government aims for

- The power grid needs to be reinforced and better interconnected to improve security of supply – regardless of the source of energy – and in order to improve competition in the electricity market, which would bring down prices.
- For an efficient integration of wind and other renewables, intraday and balancing power markets are needed, with demand-side management.
- Reinforcing key parts of the grid will provide massive savings of €1-2 billion per year.
