

Wind power installations (continued)

- Offshore saw a record growth in 2012, and the trend is expected to continue in 2013 and 2014.
- The wind power capacity installed by the end of 2012 would, in a normal wind year, produce 231 TWh of electricity, enough to cover 7% of the EU's electricity consumption – up from 6.3% the year before.
